### **Nitrogen module for Turkish Shipyard**

Mid-January N2Safety received an order for delivery of a nitrogen module with accompanying air compressors.

The module has a capacity of 750 nm<sup>3</sup>/h nitrogen production. Delivery of this module will be at the end of April, this year.

### **New order for N2Safety**

The first order for building a nitrogen module is received from an Italian shipping company.

A module for 600 m<sup>3</sup> nitrogen per hour in combination with two air compressors with a total capacity of 1800 nm<sup>3</sup>/u at 8 bar will be build. With these air compressors nitrogen will be separated from ambient air by pressing the air through the membranes. The nitrogen is unflammable and is applied as a protective layer on the cargo of tankers to reduce the risk of explosion to a minimum.
